Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/050,201

Applicant(s)

MURPHY, MICHAEL WILLIAM

Examiner

Truc T Chuong

Art Unit

2179

-- The MAILING DATE of this communication appears on the cover sheet with the correspondenc address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 16 January 2002 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Objections

1. Claim 6 is objected to because of the following informalities: it should be a "." not "," at the end of the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kubota et al. (U.S. Patent No. 5,956,021).

As to claim 1, Kubota teaches a method of character-by-character data entry that is displayed on a screen through sequential selection of characters of a collection of characters by a human user comprising:

providing a plurality of display windows on the display (e.g., col. 6 lines 30-50, and figs. 7 & 21);

defining character groups of the collection of characters, each character group to be displayed in a display window on a time variable basis (e.g., col. 3 line 43-col. 4 line 20);

successively displaying the characters of each character group in each respective display window for a display time to the user for selection, whereby a character set is simultaneously

Art Unit: 2179

displayed to the user in the respective plurality of display windows (e.g., col. 17 lines 16-47, and figs. 19B-D & 20B-D);

detecting the selection by the user of a character displayed in a display window (detecting touch position of a character, e.g., col. 13 lines 27-60, and col. 17 lines 16-47); and

entering the detected character, whereby a user may select characters as they are displayed in the display window and enter data (e.g., col. 3 line 43-col. 4 line 20, col. 13 lines 27-60, col. 17 lines 16-47, and figs. 7 & 21, 19B-D & 20B-D).

As to claim 2, Kubota teaches the method of Claim 1, wherein characters comprise word processing alphanumeric characters and punctuation marks enabling data entry of human language text and mathematical expressions (e.g., col. 17 line 16-col. 18 line 18, and fig. 21).

As to claim 3, Kubota teaches the method of Claim 1, wherein step of displaying the characters of each character group in each respective display window comprises simultaneously displaying a character capable of being selected by the user, a previously displayed character of the character group, and the next to be displayed character of the character group (e.g., col. 17 lines 16-47, and figs. 7 & 21, 19B-D & 20B-D).

As to claim 4, Kubota teaches the method of Claim 1, wherein the user defines the number of the display windows in the step of defining a plurality of display windows (a character designation area for designating types of characters; and a control key area for inputting instructions to control operations of the device, e.g., col. 6 lines 45-50).

As to claim 5, Kubota teaches the method of Claim 4, wherein the user defines the character group in the step of defining character groups (e.g., col. 17 lines 16-47, and figs. 19B-D & 20B-D).

Art Unit: 2179

As to claim 6, Kubota teaches the method of Claim 1 further comprising the step of defining a character display time for display of each character of each character group in each display window (e.g., col. 4 lines 12-19).

As to claim 7, Kubota teaches the method of Claim 1, wherein the user defines the character display time in the step of defining the character display rate and display time (e.g., col. 3 lines 44-50).

As to claim 8, Kubota teaches the method of Claim 1, wherein the character groups preferably comprise no more than three characters (figs. 13A-J show no more than 3 characters).

As to claims 9-10, they are system claims of method claims 1 and 3. Note the rejections of claims 1 and 3 above respectively.

As to claim 11, Kubota teaches the system of Claim 9, wherein the scrolling means comprises:

means for displaying a character of the character set in each display window or a display time (e.g., figs. 19B-D & 20B-D);

means for timing out the display time (e.g., col. 4 lines 12-19); and

means for replacing the character displayed in the display window with the next character in the predetermined order of the characters or each character group upon expiration of the display time (e.g., figs. 19B-D & 20B-D).

As to claim 12, Kubota teaches the system of Claim 9, further comprising means operable by the user to halt the timing out of the display time and freeze the character display in a display window (the operator can select a desired key from a group of related keys just by controlling the

Art Unit: 2179

time period between putting the pen onto the tablet and lifting it up from the tablet, e.g., col. 3 lines 46-55).

As to claim 13, Kubota teaches the system of Claim 9, wherein the scrolling means comprises means operable by the user for scrolling a character of each character group into the display window for the character group (e.g., figs. 19B-D & 20B-D).

As to claim 14, Kubota teaches the system of Claim 9, wherein the character displaying means for displaying the characters of each character group in each respective display window comprises means for simultaneously displaying a character capable of being selected by the user, a previously displayed character of the character group, and the next to be displayed character of the character group (e.g., figs. 19B-D & 20B-D).

As to claims 15-18, they are system claims of method claims 4-5, and 8. Note the rejections of claims 4-5, and 8 above respectively.

As to claim 19, Kubota teaches the system of Claim 9, further comprising an advance key usable to advance a character into a character display window in first direction for selection and a back-up key to return a character into a character display window that has advanced in the first direction past the display window to define the character set of each character group (past touch position storage unit 405 for storing a past touch position; past touch state storage unit 406 for storing a past touching pressure; past touch figure identification information storage unit 407 for storing past identification information of the touch figure as a record number of figure information record 304; shaded figure identification information storage unit 408 for storing figure identification information corresponding to the only shaded key figure; shaded code designation information storage unit 409 for storing designation information of the shaded key

Art Unit: 2179

code of the figure stored in shaded figure identification information storage unit 408; and provisionally-selected figure temporary storage unit 410 for storing identification information of a plurality of figures provisionally selected in the process of character designation, e.g., col. 7 lines 30-50).

As to claim 20, Kubota teaches the system of Claim 9, further comprising a freeze key usable to halt character scrolling and a back-up key to return a character into a character display window that has left the display window (e.g., col. 3 lines 46-55, and back original, col. 19-35).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Robinson et al. (U.S. Patent No. 6,801,190 B1) teach touch screen panel, symbols, characters, and grouping (cols. 3-34 and figs. 1A-5E).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Truc T Chuong whose telephone number is 571-272-4134. The examiner can normally be reached on M-Th and alternate Fridays 8:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather R. Herndon can be reached on 571-272-4136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
